Delaware Environmental Information Fuel Resource Mix

The following environmental information is for Delmarva Power customers who have remained with Delmarva Power and who have not selected a competitive electric supplier. Electricity can be generated from a number of different fuels. This information, also known as the “Fuel Resource Mix,” will allow you to compare the electricity supply provided by Delmarva Power to electricity supply from other electric suppliers. Delmarva Power provides this information to its customers annually via a bill insert. To review the Delmarva Power Fuel Resource Mix history (2001 to current), go to delmarva.com/_res/documents/2010FuelResourceMix.pdf. For information for other electric suppliers, visit their Web sites.

The electricity supply provided to customers by Delmarva Power from January 1, 2010, to December 31, 2010, was produced using the following fuels:

(continued on the reverse side)

**Energy Source (Fuel Resource Mix)
January 1, 2010 - December 31, 2010**

Coal	49.7%
Gas	11.1%
Nuclear	34.9%
Oil	0.5%
Unspecified Fossil	0.0%
Renewable Energy	
Captured Methane Gas	0.8%
Geothermal	0.0%
Hydroelectric	1.0%
Solar*	0.0%
Solid Waste	0.6%
Wind	1.2%
Wood or other Biomass	0.2%
Unspecified Renewable	0.0%
Total	100%
Renewable energy sources subtotal:	3.8%

*Solar electric installations in the Delmarva Power territory totaled 5.79 megawatts by 12/31/10.
