

Delaware Environmental Fuel Source Information

The following environmental information is for Delmarva Power customers who have not selected a competitive electricity supplier. Power plants can generate electricity from a number of different fuel sources. Delmarva Power reports fuel sources to help customers compare the electricity supply provided by Delmarva Power to electricity supply from other electricity suppliers.

The electricity provided to Delmarva Power's customers is supplied by the PJM Interconnection (PJM). PJM is the federally regulated regional transmission system operator that coordinates the movement of wholesale electricity in all or parts of Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia and the District of Columbia.

This information is shared with customers annually. To review Delmarva Power fuel source history (2004 to present), visit delmarva.com/fuelsources.

(continued on the reverse side)

An Exelon Company

According to PJM, from June 1, 2017 to May 31, 2018, electricity on the PJM power grid was produced using the following fuels:

PJM Energy Source June 1, 2017 - May 31, 2018

Coal	31.1%
Natural Gas	28.3%
Nuclear	35.3%
Oil	0.2%
Unspecified Fossil	0.0%

Renewable Energy

Captured Methane Gas	0.3%
Fuel Cells	<0.1%
Geothermal	0.0%
Hydroelectric	1.1%
Solar	0.2%
Solid Waste	0.5%
Wind	2.7%
Wood or other Biomass	0.2%
Unspecified Renewable	0.0%
Total	100%

Renewable energy sources subtotal: 5.0%

Although the renewable energy source total in PJM is 5.0%, Delmarva Power complied with the Delaware Renewable Portfolio Standard (RPS) requirements of 16.0% for the year through the purchase of Renewable Energy Credits (RECs). Delmarva Power purchases both renewable energy and RECs from approved resources in Delaware and the PJM area.
