HELPING YOU HARNESS THE POWER OF THE SUN

Did you know that the sun is the most abundantly available renewable energy source?

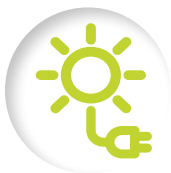

Learn how you can harness the sun's energy with our WattPlan® tool!

delmarva.com/gpc/de

green power connection™

Fall months are the perfect time to consider the sun's renewable energy potential. As your energy use goes down, cooler days allow your solar energy system to produce energy more efficiently; this is the ideal time for excess energy to flow onto the grid and provide you with bill credits.

At Delmarva Power, we're committed to a clean energy future and are empowering our customers and communities with the ability to make more informed decisions about solar energy adoption.

That's why we offer our free, online WattPlan® tool. It can help you estimate the system size to meet your needs, how much energy a solar generating system might produce, and how much you can reduce your carbon footprint.

TOOLS & RESOURCES

Private solar energy systems may be a great way to generate your own electricity. Delmarva Power's Green Power Connection™ team can help you:

- Navigate the interconnection process
- Calculate the best size system for your home
- Answer important questions you may have

Learn more by viewing tools and resources available on our website.
