Ways to Save Energy While Staying Warm

If you've noticed that some of your rooms are too cold, it may be time to switch to a high-efficiency HVAC system. As much as half of the energy used in your home goes toward cooling and heating. Replacing your heating system with a new **high-efficiency HVAC system** can make a big impact on your energy costs now and for years to come.

Signs It May Be Time to Replace Your HVAC System:

- **Your heat pump or air conditioner is more than 10 years old.**
Make the switch to a high-efficiency unit that can save you up to 30 percent on heating and cooling costs.
- **Your equipment needs frequent repairs and your energy bills are going up.**
Consider replacing your heating and cooling equipment as it may have become less efficient.
- **Your heating or cooling system is noisy.**
You could have an undersized duct system or a problem with the indoor coil of your cooling equipment.

Learn more at delmarva.com/HVAC and talk to your contractor about installing a high-efficiency system.

EmPOWER Maryland programs are funded by a charge on your energy bill. EmPOWER programs can help you reduce your energy consumption and save you money. To learn more about EmPOWER and how you can participate, go to delmarva.com/SaveEnergy.
