

# Helping You "Go Solar."

## How you can benefit from solar generation.

- Find out more about our commitment to solar generation and how you can "go solar"
- Estimate your electricity savings with our WattPlan® service
- Easily apply online and get support with Green Power Connection™

An Exelon Company

Supporting solar power is a core part of our vision for green, sustainable and affordable electricity for all. We want to make solar more accessible by partnering with our customers to help you “go solar” and take advantage of the benefits of solar power.

Our customers are increasingly interested in generating their own power through solar energy. Over the past five years, the number of our customers that have successfully “gone solar” has increased by more than 500%, and we aim to grow this number even more in the coming years.

#### Here are three advantages to “going solar”:

- **Take control of your energy use** and own your power generation
- **Save on your energy bills** by getting credits for excess energy you produce
- **Protect the environment** by opting for safe and carbon-free energy

#### “Going solar” can help you save on your energy bills

When you own a solar generation system, you produce your own electricity, which means you don’t have to buy it. And when your system generates more power than you use, like on a beautiful spring day, you can put that power back onto the electric grid in exchange for bill credits that may lower your bills in the times when you consume more electricity than you produce.

We have set up an easy-to-use, online service called **WattPlan®** to find out how much a solar generation system might produce on your property, how many pounds of Carbon Dioxide you could eliminate per year and how much you might save on your electric bills. Simply enter your home address and some basic information about your bills, and WattPlan® will give you a personalized estimate to help you determine how much “going solar” could benefit you.

# green power connection™

#### We’ve made it easy for you to “go solar”

We’ve taken steps to make it easy for you to find out if solar is right for you. We’ve launched an online resource center at [delmarva.com/solar-right-for-me](http://delmarva.com/solar-right-for-me) to give you all the information you need about connecting to the grid. We also have a dedicated Green Power Connection team to help answer your questions and guide you through the process of applying for a solar generation system on your property.

Another useful tool we have created and that we recommend you take a look at if you are interested in “going solar” is an online, interactive circuit map. You can use this map to check if your property is connected to an open or restricted circuit, which will help determine if you can install your solar generating system right away.

**Interested in “going solar”? Get started by visiting us online at [delmarva.com/solar-right-for-me](http://delmarva.com/solar-right-for-me) and use our tools to find out if solar is right for you. We are ready to partner with you as you consider interconnecting a renewable energy system to our grid.**

## Committed to a Brighter Future

Our Green Power Connection resources can help you explore your solar energy options. A good way to begin is by looking at your home.

### You might consider a solar generating system if:

- Your roof faces south, southeast or west with good sun exposure
- Your home has minimal shade and obstructions
- You have a large, flat surface on your roof or grounds

We invite you to visit us online to learn more. With thousands of customers now producing their own solar power, we're committed to a brighter future for the communities we serve.
